Lab 11 Team Buildout Implementation II

The objective of the lab is to continue working as a team to add functionality to the network that you have built in the lab.

The persons with whom you have conducted all of the previous labs will continue to be responsible for ensuring that the persons within that team's Organizational Unit (OU) remain able to get work done using the user accounts and computers within that OU. In this regard, you and your former lab teammates will represent end-users on this system, and these persons will place demands and expectations upon the Buildout Teams that will be performing other administrative functions across an entire enterprise that happens to contain your former team's OU, users, and computers. One demand and expectation might be, quite reasonably, that no Buildout Team perform any action that renders you and your fellow users unable to perform the work that they need to get done, e.g. corrupting the Active Directory beyond use, recognition, and recovery.

In the previous lab, you formed a Buildout team, identified a need for services, processes, and/or systems, and formed a rudimentary plan for addressing that need.

Again, the mission is to assume a portion of the myriad processes and functions required to effectively, efficiently, and securely administer a real-world computer network: some of these processes were discussed in the previous Buildout Project Kickoff Meeting.

You will continue, as a team, to carry out this mission, and that team will conduct research, read technical materials and acquire skills, collaborate and coordinate with other teams, write procedures and/or install and configure systems, and do whatever else is necessary to carry out your team's mission.

This is a team assignment, but you must submit it as individuals, with all submitted work being your own.

Actions

Action 1: By now, your Buildout Project Team should have identified a need to be addressed, and should have formed a rudimentary plan for addressing that need.

For Deliverable #1, write your name, the number of your team, the name of your partners, and the date.

For Deliverable #2, describe the need that you have identified.

For Deliverable #3, describe briefly the manner by which your team intends to meet that need.

Action 2: Your team will need a plan under which you intend to carry out this project. You need to continue to refine roles served by team members, coordinate the persons assuming their roles and their work products, conduct research on what your team intends to do and how, marshal and coordinate resources, coordinate with other teams and the end-users', and organize all of the above into a work product that can be demonstrated, presented, and explained to both the class and to the instructor.

For Deliverable #4, describe the role you, personally, are assuming in the project at this time.

For Deliverable #5, describe, very briefly, what research your team is conducting.

For Deliverable #6, describe briefly the resources that you think your team will need to conduct this project.

For Deliverable #7, are you aware of any activities conducted by other teams that may help or hinder your own team's progress in completing your project? If so, describe them in brief.

Deliverables

Deliverable 1: From Action 1, write your name, the number of your team, the name of your partners, and the date.

Deliverable 2: From Action 1, describe the need that you have identified.

Deliverable 3: From Action 1, describe briefly the manner by which your team intends to meet that need.

Deliverable 4: From Action 2, describe the role you, personally, are assuming in the project at this time.

Deliverable 5: From Action 2, describe, very briefly, what research your team is conducting.

Deliverable 6: From Action 2, describe briefly the resources that you think your team will need to conduct this project.

Deliverable 7: From Action 2, are you aware of any activities conducted by other teams that may help or hinder your own team's progress in completing your project? If so, describe them in brief.
